Jonathan:

We are having a meeting to discuss the site tomorrow. I am trying to get an update on operations at the Refinery. I sure you guys are complete or close to complete on Tank 16 and will be moving on to either Tank 12 or Tank 30. Please detail to me your plan of attack on these tanks and when you intend on addressing the waste materials in tanks 7 (est. 861 bbls) , 12 (est. 6246 bbl) , 26 (est. 140,00 bbls), and 30 (est. 6100 bbls).

Also, I would like an update on the status of the lease with Superior. It is my understanding that Superior sold its business to High Sierra. I would like to know your plans on the facility and to remind you that you will have to put together and get an FRP approved before you can begin operating any of the tankage on the facility. I do not believe that you can use Superior's existing FRP for your purposes except for maybe a guide for an FRP. I can put you in touch with the correct person at EPA to move forward with that process.

I am sure we will be talking about the dock area at our meeting tomorrow.

Thanks

Gary Moore
